

How to Use Jupyter Notebook

Using the Online Version:

Open Jupyter Notebook

- Open a web browser and search <https://jupyter.org/try>.
- Once on the website, look for and click on the box that says “Try JupyterLab”:

- The program may take some time (e.g., 30 seconds) to open.

Open a File in Jupyter Notebook

- In the top left of the screen, find the icon that has an arrow pointing up with a line underneath:

- This is the upload button. If you press it, you will be able to select a .ipynb file to open.
- Once the file is uploaded, it will appear in the list of documents on the left side of the screen.
- Double click the file to open it and start working!

Save your Work in Jupyter Notebook

- **Attention:** You will lose the work you do in Jupyter Notebook if you exit your browser or if you are not active in the browser for a certain period of time.
- In the top left corner of an opened file, there is a button (📁) that you can use to save your work *within* the browser.
- But if you are going to exit the browser or be inactive for a period of time, you will need to save the file to your computer. To do this, right click the file where it appears in the list on the left side of the screen and click download. Choose the “Save file” option and click “OK”. You will find the file in your Downloads folder.
